Itemized Test Case Results

Detailed breakdown of query input, generated explanation, and judge critique for each test item.

#1. t1 Feature: N/A Domain: N/A	PASS (Good) [37.0s]
SQL Query: SELECT COUNT(*) FROM users WHERE age > 30; Generated Explanation: This query counts how many users are older than 30 years. It looks at the 'users' table and checks each row to see if the age is greater than 30. If a user is older than 30, it counts that user. The final result is a single number showing the total count of users older than 30. Judge Critique / Reason: The explanation correctly identifies the query's purpose, covers the WHERE condition, and explains that the result is a single number.
