SQL Explanation Grader: baseline vs RAG

Experiment **rag_v4_dev** · split **dev** (50 items) · generator **llama3.2:3b** · judge **qwen2.5:3b** (rubric) · generated 2026-10-26 18:08

How to read this report. "Judge approval" is the share of explanations an LLM judge graded good. It is an automated, unverified measurement, not ground truth. Deterministic checks are rule-based heuristics computed from the SQL structure. Agreement of the judge with reference labels is reported separately (results/rag/judge_agreement.json).

Retrieval evaluation (no LLM involved)

Project-authored by Claude (AI-assisted) on 2026-10-26 by reading the section headings of each corpus document. Not human-reviewed yet. Treat retrieval scores computed with it as rule-based estimates, not human relevance judgements.
